Disposable Lighted Stylets

Orotracheal Lighted Intubation Stylets assist in the proper placement of an endotracheal tube without direct visualization of the cords. By using the lighted stylet, the user is assured of the correct placement of the endotracheal tube when a bright glow in the midline of the laryngeal prominence is seen. Flexible shafts, protective coating over the bulb housing and a one hand activating on/off switch provide easy operation, safety and convenience. The Lighted Intubation Stylet is designed for emergency and trauma situations in the field, E.R. and intubation procedures in the operating room. It also serves as an effective alternative to the standard laryngoscope. All stylets have an adjustable endotracheal tube adapter for use with a variety of sizes. All Aaron lighted stylets have a four year shelf life.

- Aids in the proper placement of endotracheal tubes
- Effectively transilluminates the soft tissue of the neck
- Provides minimal neck flexion in trauma cases
- Aids in blind intubation
- Single use
